

The Green Engineer, LLP

Sustainable Design Consulting

Smack Mellon Studios Brooklyn, New York

This leading non-profit arts organization, a key player in the revival of the Brooklyn Waterfront, recently acquired raw space in a historic boiler facility facing the East River. Abandoned for decades, the 12,000 s.f building now holds exhibition and administrative spaces, an artists' studio program and a performance art area.

Sustainable design with a tight budget played a major role in this renovation, which included adding 25 windows to increase daylight in the building.

For Smack Mellon, The Green Engineer was a pro-bono consultant.
